

For sale, several 3D printed accessories for the M2, M1, and other rigs.
All prices include USPS shipping in the USA.
All threaded holes in the 3D parts have Helicoils for strength.
All hardware is included.
Custom parts also available.

The BattCheez

An accessory “dummy” battery plate, either V-mount or AB mount. We first designed the plate to protect the optional 3rd battery mounts on the bottom of the M2 and also to provide a flat surface so the sled can be set down safely on its base.

We added a number of 1/4-20 mounting holes to the plate so that accessories can be easily added wherever there is a spare battery mount – including on the back of a camera. It makes some of those crazy, accessory laden camera builds a little easier. The plates solidly mount to the battery holders, without wiggle. However, the plate is not designed for mounting heavy accessories like gyros. \$125.

VOLT Low-mode Collar

A low-mode docking collar for the M1, M2, and other “Volt modified” sleds (Ultra2, Archer 2, PRO, etc.) \$75.00. Specify which sled and gimbal you have.

Monitor Weights

Steel (not 3D printed!) monitor weights to fit Tiffen’s universal monitor mount (some monitors are so darn light you need the extra weight!). Set of two 1/2 lb weights, (1 pound total), \$75.00. Set of 4 weights with 2 set screws included for stacking, \$135. Easily adaptable to other monitor yokes.

V-lock Bumpers

Protective bumpers for the release buttons on V-mount battery holders. A classy version of this bumper is part of the M2's design. These bumpers are intended to retrofit other sleds that use V-lock batteries. Right now I have two versions – one for IDX branded battery holders, and one for another unmarked brand. Not all brands of V-mount battery holders can be accommodated as some of the release buttons stick out way too much. \$20 for a set of two protectors.

Aircraft Pin Cushion

A soft, protective bumper for the sharp edge of the “aircraft pin” on the arm. Two sizes, big (the old standard) and slim. \$20. (These bumpers are made of a cushiony material that is a PITA to print, but they work very well). Specify your pin size.

Angled Kickback Block

A kick back block for the arm socket block. This general design is now standard on Tiffen arms to allow the upper arm section to move further back and out of the way as the sled is placed more in front of the operator's body. An example of this is shooting to the right when operating in regular mode. Also shown in above pix. \$35.

EZ Cable Guide

Just for the M2: A replacement for the supplied cable guide. It's easier to attach and detach cables. It's free when purchased with any one of the other accessories. \$10.00 when ordered separately (The price is really about the cost of shipping)

VF Prompter Bracket

A prompter monitor bracket to fit broadcast cameras, one for Sony and one for Ikegami. The bracket mounts securely to the eyepiece holder. Vibration-free. Slots are for the standard 75mm Vesa spacing, using 2 holes on the monitor. Two M4 thumb screws included. \$75 each or \$135 for both brackets. Each bracket has a 1/4-20 threaded hole for mounting options.

75100X Bracket

This bracket is for mounting monitors with 75mm or 100mm Vesa spacing. Five ¼-20 threaded holes. Four 4mm thumb screws included. \$100.

Email me with any orders (I don't generally answer PM's). jholway@comcast.net. Any questions will be answered here. Ideas for other accessories welcome.
