

Volt encoder ring protector:

This 3D printed assembly protects the encoder ring without adding any height to the gimbal. It is non-destructive and easy to install or remove without disassembling the sled or the Volt. The protector ring works for both regular and goofy mounted Volts, and comes with a cable clamp.

There is a slight difference between the protectors mounted on M1 gimbals (and modified M1 gimbals) and those mounted on gimbals modified for the Volt. Please let me know what gimbal you have when ordering. This accessory is completely unnecessary for the M2 Volt, of course. \$100. Price includes shipping within the USA. International shipping is extra.
