

New stuff: Customers asked for these, so now they are a product.

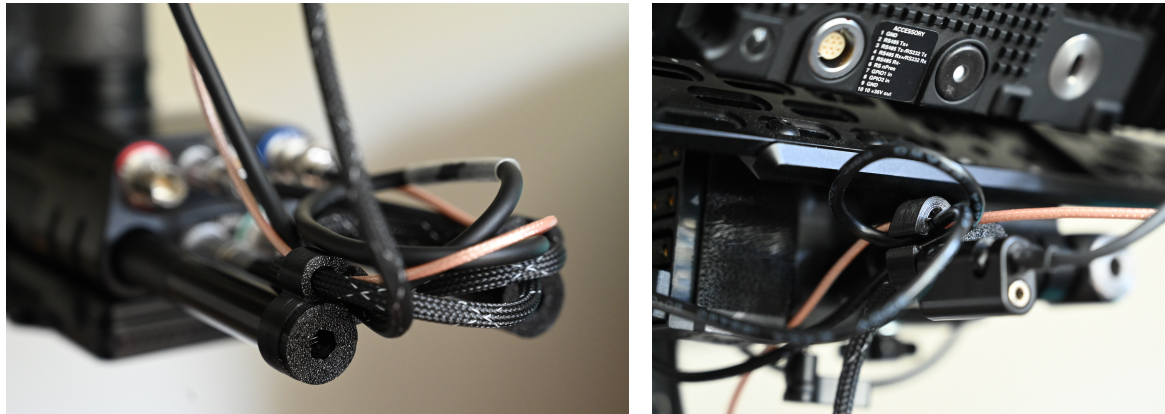

Medium dovetail mount to low mode pivoting monitor mount

This part also was designed specifically for sleds with a medium dovetail plate (Aero/Zephyr etc.) but lacking 15mm rods. When used with the Zalex™ Longplate M, it makes it easy to add a 2nd small monitor for low mode work. The picture shows the “L pivoting arm” version, designed for monitors with the mounting hole on the bottom. For monitors with the mounting hole on the back (like the Starlite™), there’s a version with a “straight” pivoting arm. Either one, \$125.

Cable wrangler for 15mm rods with 1/2-13 threads (M2/Zacuto, etc.)

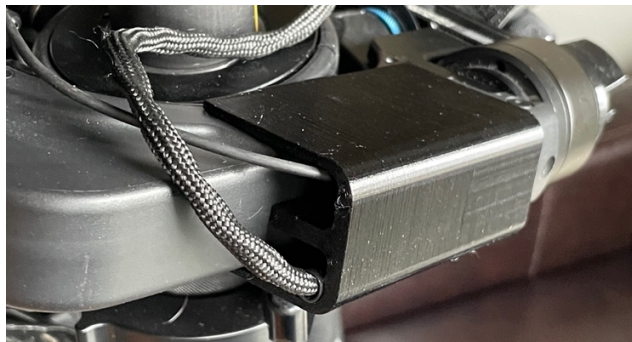

Holds two or three cables in a flexible plastic. It does not take up space on the rod, so telescoping the monitor or battery is less frustrating. Parts screw into 15mm rods. Orientable. \$25

OK, not so new, but it disappeared from my product list...

Volt cable shield

This shield snaps on to protect the cables and connectors to the Volt motors. Simple and effective, and especially useful then resting the sled on the shoulder between takes. \$50.
